# Object-Oriented Programming with Java

Introduction to the course

Antonius Camara

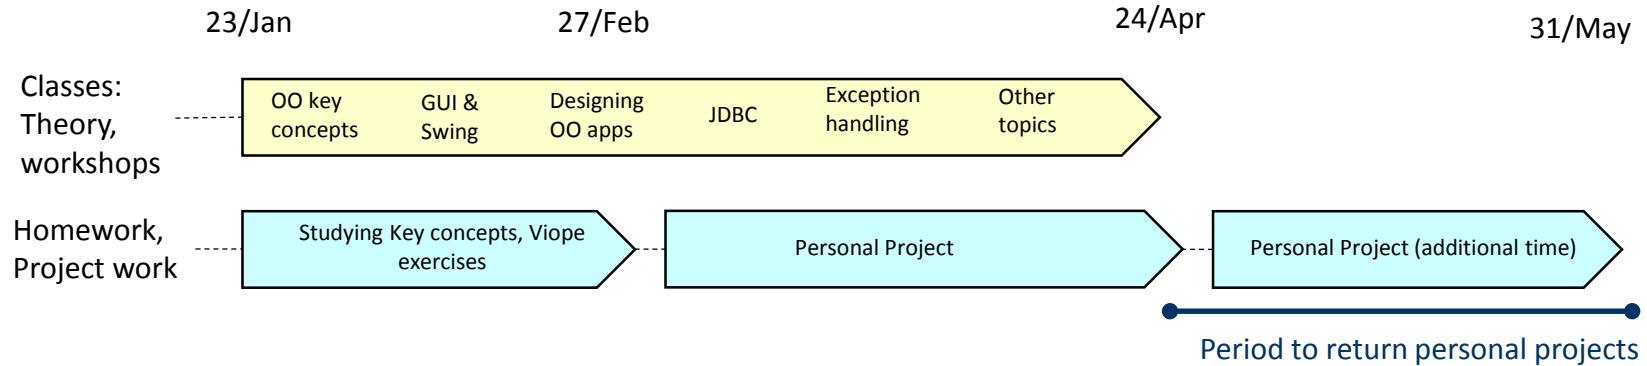

# Why learning Object-Orientation?

- ▶ Extending your basic programming skills
- ▶ Object-Oriented programming techniques are a necessary pre-requisite to build proper applications
- ▶ Many commonly used development frameworks are based on objects
  - ▶ Android SDK (Java), Java Vaadin, PHP Symfony, PHP Laravel
- ▶ Object-Orientation is the most popular programming paradigm currently in use

# Java learning path (one example)

- ▶ Level 1
  - ▶ Basic programming constructs learned in the 1st year course - Fundamentals of Programming
  - ▶ Using a IDE (Eclipse)
- ▶ Level 2 (This course)
  - ▶ Object-Oriented principles
  - ▶ Designing and building simple OO applications
  - ▶ GUI design and programming (Swing and Eclipse's WindowBuilder)
  - ▶ Access to relational databases (JDBC)
  - ▶ Exception handling, debugging
  - ▶ Basics of version control (Github)
- ▶ Level 3
  - ▶ Applying Design Patterns (ex: MVC)
  - ▶ Implementing complex user interfaces
  - ▶ Implementing complex programming logic using complex data structures and Classes
  - ▶ More complex version control workflows (contributing in geographically dispersed teams)

# Course agenda, workload and evaluation

## Workload – 5 credits (135 hours)

■ Classes ■ Homework + Project Work (outside classes)

## Evaluation

- Individual project
- Application meeting a given criteria
- Points are given for different items
- Self-evaluation form

0-50 points: 0, Not passing the course

51-60 points: 1

61-70 points: 2

71-80 points: 3

81-90 points: 4

91-100 points: 5

# Resources to support your studies

- ▶ Classes
  - ▶ Key concepts explained by the teacher
  - ▶ Guided exercises
- ▶ Optima (Agenda, course material)
- ▶ Asio (Date, time, classroom of contact sessions)
- ▶ Material provided by the teacher
  - ▶ Slides explaining key concepts
  - ▶ Student's Workbook
    - ▶ General guidance about different activities related to the course
  - ▶ Project's evaluation criteria
    - ▶ Evaluation targets and corresponding points
    - ▶ Self-evaluation form
- ▶ Books, Electronic books, Viope
  - ▶ Details available in the student's Workbook
  - ▶ Some programming exercises on Viope
- ▶ Github
  - ▶ Source code for exercises done at the Classroom

# Teacher's and students' roles

- ▶ Teacher
  - ▶ “Paving the way” (key concepts, roadmap, targets, goals)
  - ▶ Contact sessions to help students getting quickly up-to-speed with key concepts and tools
  - ▶ Facilitating the learning process
  - ▶ Evaluation
  - ▶ No step-by-step instructions
- ▶ Student
  - ▶ “Walk the way” – Explore and learn
  - ▶ Reserve enough time for homework and to work on own project outside contact sessions (about 7 hours/week)
  - ▶ Ability and willingness to learn independently: study relevant resources, information search, hands-on work with own computer
  - ▶ Troubleshooting of issues
  - ▶ Comply with the evaluation targets and criteria. Self-evaluation
